

Training

Get trained by Industry experts

Accuratt has more than 25 years of experience in giving training to laboratory staff all over the world with extensive knowhow and expertise in Gas/Liquid Chromatography:

- Standardization
- Application training
- Sample preparation and sample handling
- Calibration and Verification
- Hardware and software training
- Parts replacement
- Trouble shooting and maintenance
- Results verification and validation

What makes us different?

The trainer focusses on the needs of the customer, by looking at the core need of every lab:

The purpose of the analysis, the chemometrics, standardization , accuracy, precision and result interpretation as well trouble shooting and maintenance. Creating experts users by mean of understanding the application and be critical towards the results, recognize the bottlenecks and act.

Training

Factory Training

Being in the factory has the advantage of having more hands-on with different hardware, software and applications while being close to the factory experts. The training can be customized to your need.

Online Training

Online training gives you the flexibility to have more people from around the world attend at the same time. The online sessions are very helpful to deeply understand the analysis principles, application, software and much more

Onsite Training

Onsite training gives you the opportunity to have dedicated training on your instrument and application. The focus on improving the workflow and efficiency and have the accessibility to your own analyzer and application has an advantage

Custom

Customized training gives you the flexibility to structure your course with the information unique to your laboratory to create a highly effective training course targeted and relevant to your team

Book a 5 days training and get 2 days training free of charge.
